

Two-column lesson with table and formula

LEFT COLUMN

Mitosis produces genetically similar daughter cells.
Prophase is followed by metaphase, anaphase, and telophase.

RIGHT COLUMN

Meiosis contains two divisions and produces haploid cells.
Independent assortment increases variation.

Formula: $P(A \text{ and } B) = P(A) * P(B)$

Stage	Chromosome state
G1	unreplicated
S	DNA replication
G2	replicated
